

The diagram illustrates a network architecture for providing content to subscriber devices. A central cloud labeled "internet 100" acts as the hub. Connected to this cloud are several servers: "Webmaster Server 120", "Ad Server 110", "List Server 140", and "Content Server 150". The "Ad Server 110" is further connected to two databases, "DB 112" and "Ref/PayoutDB 114". The "List Server 140" is connected to a database labeled "List DB 142". At the bottom, three "Subscriber device 130" (represented by a desktop monitor, a laptop, and a tablet) are connected to the "internet 100" cloud. The entire system is designed to facilitate the delivery of content to these subscriber devices through the internet.
